### HA 气动直行程薄膜式执行机构

#### HA Pneumatic Straight-Stroke Diaphragm Actuator

HA<sup>[1]</sup> 气动直行程薄膜式执行机构是一种采用多弹簧结构，体积小、重量轻、性能高、输出力大的直行程气动薄膜执行机构。

HA<sup>[1]</sup> pneumatic straight-stroke diaphragm actuator, a kind of straight-stroke pneumatic diaphragm actuator, has multi-spring structure, small volume, light weight, high performance and high output force.

HA 气动直行程薄膜式执行机构，它把气动调节仪表的输出压力转换成推杆位移的变化。因此，只要它与调节阀的阀体部分相应连接就可把阀芯移到与输入信号相对应的位置。

HA pneumatic straight-stroke diaphragm actuator transfers the output pressure of the pneumatic control instrument to changes of the rod displacement. Therefore, the valve core can be moved to the position corresponding to input signal as long as it is connected with the body of the control valve.

该执行机构与本公司的定位器配合使用可实现高精度的位置控制

High accuracy position control can be realized by matching the actuator with the positioner of the company.
